DIOS acquires the Lac LeCaron lithium project, Eeyou Istchee James Bay, Québec

Dios Exploration Inc. reported on February 16, 2023 that it has acquired the Lac LeCaron lithium project within Eeyou Istchee James Bay prolific lithium region of central Québec. The new acreage totals some 57 claims for 3000ha north of LeCaron Lake, ~12 km NNE of Eastmain-1 powerhouse and facilities. It is located within LaGrande geological subprovince, 15km from Opinaca subprovince boundary. The Lac LeCaron acreage is located north of Dios' Lithium33 and Au33 properties and Critical Elements Lithium Corp. (CRE-V) property hosting advanced Pivert-Rose lithium and tantalum deposit (<https://www.cecorp.ca/en/>) and further south the Nemaska lithium deposit (Wabouchi) located near Nemiscau. Sayona's Moblan project is located further south on the Route du Nord (see: <https://www.linkedin.com/pulse/sayona-mining-limited-sya-asx-otcsyxf-reports-new-lithium-lemieux/>).

Potentially well located: The LeCaron lithium claims occur along a cluster of lithium metal lake sediment anomalies (Li values between 8 and 10.5 ppm in the James Bay secondary environment) combined with anomalous proprietary Dios' sampled glacial tills of 27.4, 27.9 & 29.5 ppm Li in heavy mineral fraction. Other anomalous critical elements (such as cesium over 2ppm, up to 5ppm) were also observed in lake sediments.

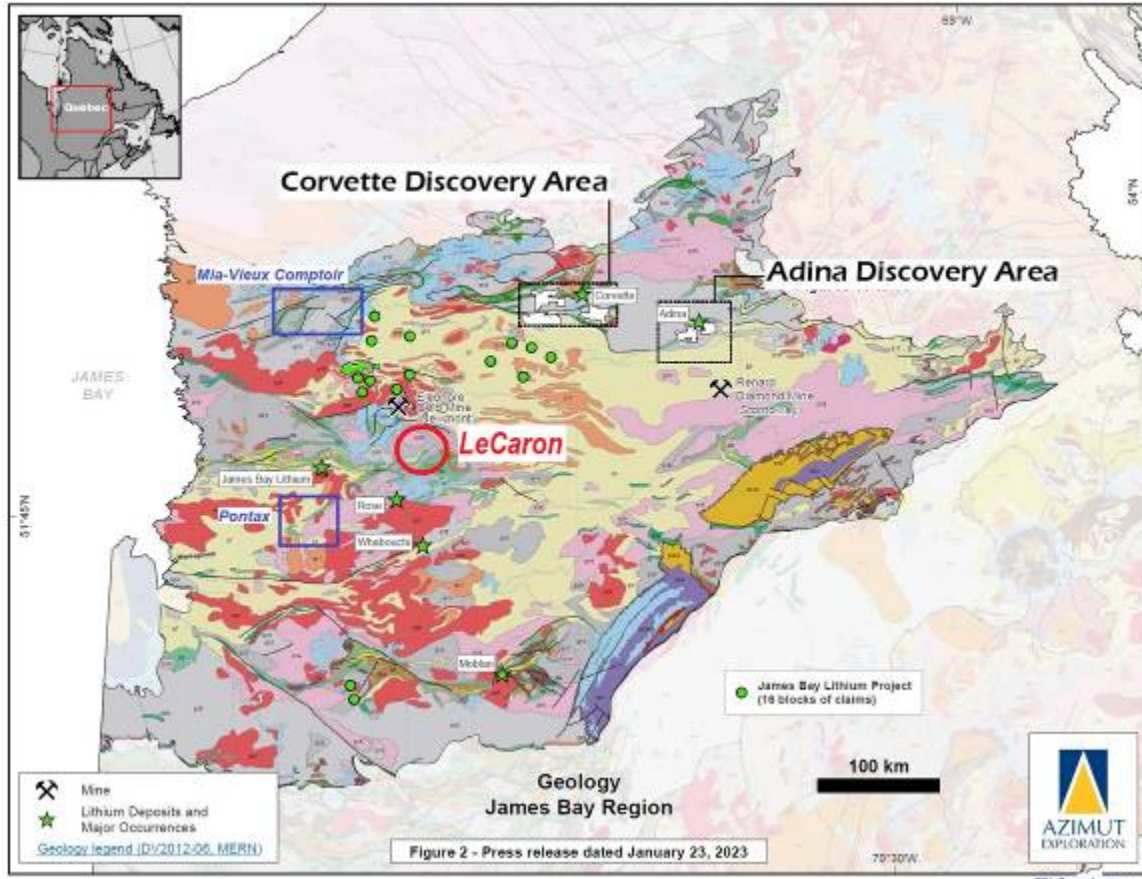

The 100%-owned Lac LeCaron lithium claims cover a 12km-long prospective E-W section hosting a pegmatitic pluton (granite/granodiorite) with pegmatite pockets and dykes (5-30%) at the margins of a NE meta-sedimentary and volcanic rock belt.

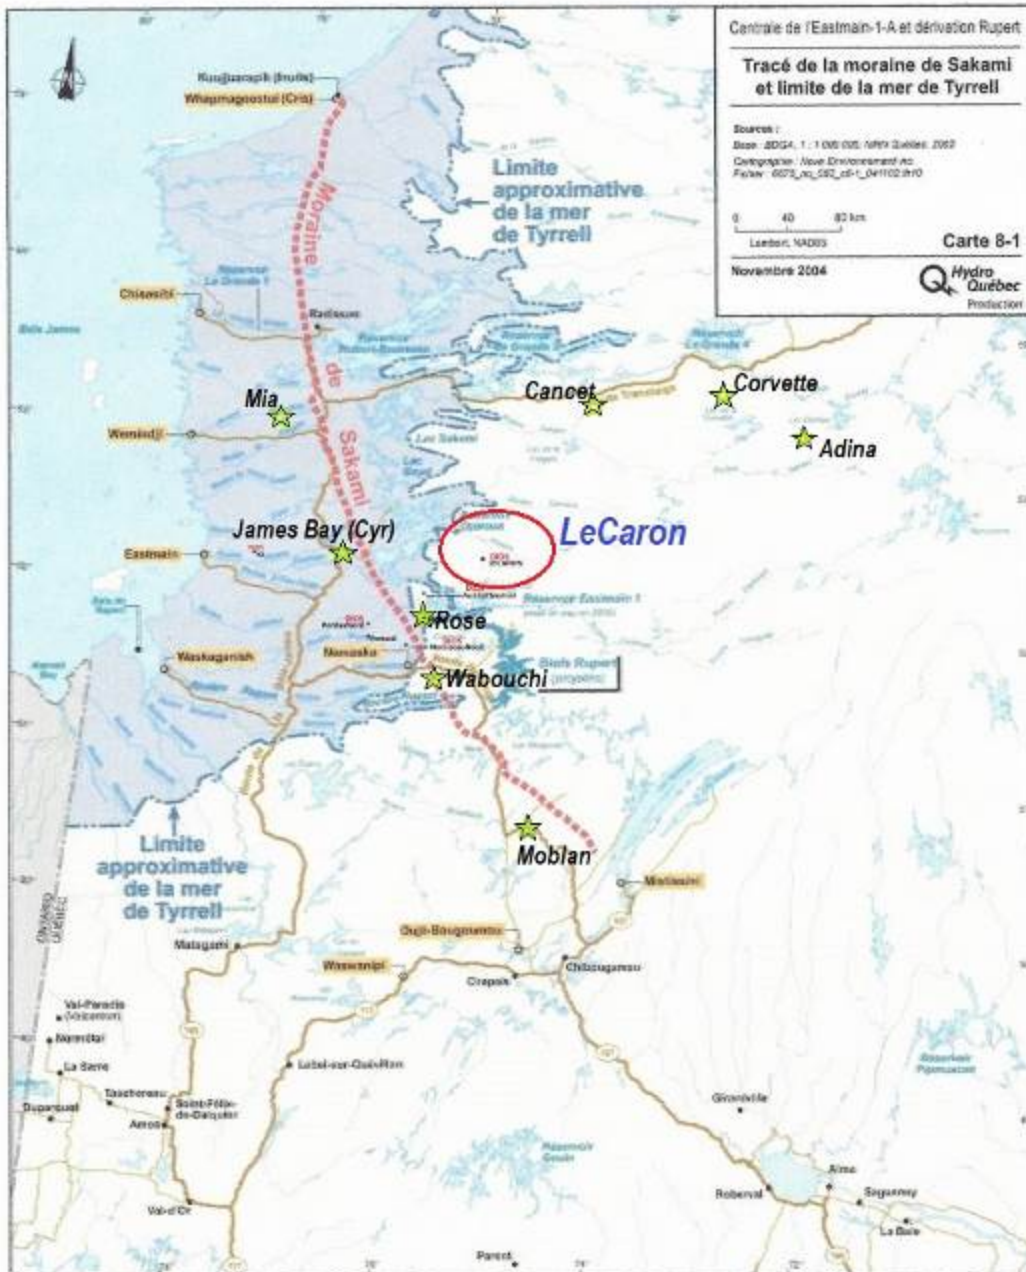

The claims are also located in the vicinities of several magnetic E-W and WNW magnetitic features cutting through the general NE-SW magnetic trend.
